
PIZZA SQL PROJECT

INTRODUCTION

My name is Satender, and I am a data enthusiast with a passion for uncovering stories hidden within rows and columns. This SQL project represents a deep dive into PIZZA PROJECT, where I applied my skills in data cleaning, aggregation, and multi-table manipulation. This project reflects my commitment to technical precision and my ability to translate complex datasets into meaningful insights.

Datasets

pizza_hut DB.sql

Our Pizza

Objective

Basic:

- Retrieve the total number of orders placed.
- Calculate the total revenue generated from pizza sales.
- Identify the highest-priced pizza.
- Identify the most common pizza size ordered.
- List the top 5 most ordered pizza types along with their quantities.

Intermediate:

- Join the necessary tables to find the total quantity of each pizza category ordered.
- Determine the distribution of orders by hour of the day.
- Join relevant tables to find the category-wise distribution of pizzas.
- Group the orders by date and calculate the average number of pizzas ordered per day.
- Determine the top 3 most ordered pizza types based on revenue.

Advanced:

- Calculate the percentage contribution of each pizza type to total revenue.
- Analyze the cumulative revenue generated over time.
- Determine the top 3 most ordered pizza types based on revenue for each pizza category.

```
use pizzahut;
